

rods

This scanning electron micrograph shows a dense field of photoreceptors. The rods are long, thin, and purple, while the cones are shorter, wider, and brown. They are all situated on a green, textured layer of retinal pigment epithelium. The label 'rods' is in a purple box at the top.

cones

This scanning electron micrograph shows a dense field of photoreceptors. The rods are long, thin, and purple, while the cones are shorter, wider, and brown. They are all situated on a green, textured layer of retinal pigment epithelium. The label 'cones' is in a purple box at the bottom, with two white arrows pointing to individual cone cells.
